2026 Compensation Planning: Data and Insights to Inform Your Salary Budget Decisions

Rebecca Toman

VICE PRESIDENT, SURVEY BUSINESS
UNIT

Most HR teams are now focused on 2026 salary budget planning, which should not be done without reputable market data. While hiring has slowed in some sectors, the labor market remains competitive. Ensuring that salaries remain aligned with market conditions helps attract top candidates and maintain engagement among current employees. Pearl Meyer's 2025–2026 [Compensation Planning Survey](#) offers reliable and timely data to support strategic compensation decisions that help companies attract and retain great employees.

This year's survey achieved its highest level of participation ever with data for 563 organizations reported. This record participation shows how important data has become for decision-making around annual salary increases.

Across all firms, 89% implemented a compensation increase program in 2025, up slightly from 88% in 2024. The average actual total salary increase in 2025 was 3.8%, compared with 3.9% in 2024, and budgets for 2026 are projected to average 3.7%. These levels reflect a return to pre-pandemic norms after several years of elevated budgets. When looking at base salary increase budgets for different employee categories (non-exempt,

exempt, management, and executive), there is minimal variation.

Salary Increase Trends

Global Increases

The 2025–2026 survey collected salary data for over 60 countries, offering valuable global insights. Below are average total salary increase projections for 2026 across several notable countries.

Pay increase projections in Canada, United Kingdom, Singapore, and Australia remain in line with U.S. averages, while India continues to post higher growth, consistent with last year’s figure. Salary increases in China declined this year (4% compared to 5% last year)

mainly due to slower economic growth and cost pressures.

Rewarding High Performers

The report again shows a strong link between performance and pay differentiation. Across all industries, the most significant variance appears in software and consulting services firms where nearly 55% of companies grant high performers 150% to 300% of the average salary increase for their peers. In contrast, health care organizations report the smallest differentiation between average and high performers.

2026 Compensation Priorities

The survey also examined broader pay-related objectives. Respondents identified their top strategic goals for 2026 as follows:

- Retaining high performers
- Ensuring market-competitive compensation
- Managing salary costs
- Improving the link between pay and performance

More information, including the data reported and participating organizations, can be found [here](#). The report serves as a valuable benchmarking resource to compare your company's annual salary increases with data from 563 organizations.
